**Assessment Option 1 – Dietitian**

Goal:
The goal is to improve your client’s fast food choices.

**Role:**
You are a dietitian at the local health clinic.

**Audience:**
The target audience is your client, Mr. Ayelub Burrgers.

**Situation:**
You need to develop a plan that Mr. Ayelub Burrgers can use when he visits his favorite fast food restaurant. The plan should help Mr. Ayelub Burrgers should let him visit his favorite fast food restaurant and make healthier choices from the menu.

**Product Performance and Purpose:**
Step 1: You need to read over Mr. Burrger’s favorite fast food meal.

Step 2: Then you need to go to the restaurant’s website and find out how many calories and nutrients he is getting from his meal.

Step 3: Based on the information you gather, you need to decide whether Mr. Burrger’s meal is healthy and how he can improve it.

Step 4: Finally, you need to go back to the restaurant’s website and find another meal that Mr. Burrger can have that will make him happy and healthier.

**Standards and Criteria for Success:**
Your plan should...
- Tell Mr. Burrger about the nutritional content of his favorite meal
- Tell what is unhealthy about Mr. Burgger’s favorite meal
- Provide Mr. Burrger with another meal that is healthier
- Tell Mr. Burrger why the new meal is better for his health
- Contain correct spelling, grammar, and punctuation

**Materials:** Mr. Burrger’s fast food diary page, data sheet, computer with Internet access, calculator, pencil, paper
Action Plan for Mr. Ayelub Burrger

Mr. Ayelub Burrger’s Fast Food Diary
Entry Number 345

I just love McDonald’s! Today when I visited I had my favorite meal – a Number 1 Combo.

Big Mac
Large Fries
Large Coke

Assessment Option 1 – Dietitian

Goal: To choose healthier menu items when visiting your favorite fast food restaurant

Mr. Ayelub Burrger
Daily Goals:
2,400 calories
50 grams of total fat

Go to http://nutrition.mcdonalds.com/bagamcmeal/bagMeal.do to find out how many calories and nutrients Mr. Burrger consumed. Then, fill in the data chart below.

<table>
<thead>
<tr>
<th>Calories</th>
<th>Total Fat(g)</th>

____________________________________________________________________________________

____________________________________________________________________________________
Goal:
The goal is to improve the nutritional value of a favorite snack food.

Role:
You are a food scientist at a local university.

Audience:
The target audience is the consumer and the producer of a favorite snack food.

Situation:
You need to analyze and evaluate the nutritional content and ingredients of a favorite snack food and develop a proposal on three ways that you can improve it. The proposal should help the producer provide a healthier, more nutritious snack to the consumer.

Product Performance and Purpose:
Step 1: You need to analyze and evaluate the nutrition label and recipe of the snack food.

Step 2: Then you need to decide on three ways that the nutritional content of the food can be improved.

Step 3: Finally, you need to tell the producer why making the changes would improve the snack and make it better for consumers.

You may also wish to create a new nutrition label and recipe based on the changes you proposed.

Standards and Criteria for Success:
Your proposal should...
- Tell the producer your findings after analyze and evaluating the nutrition label
- Give the producer two ways to improve the nutritional content of the food
- Tell the producer how making the changes would make the food better for consumers
- Contain correct spelling, grammar, and punctuation

You could include...
- A revised nutrition label
- An updated recipe
- New product packaging

Materials: Recipe for favorite snack food, calculator, data sheet, tip sheet
Recipe for Chocolate Chip Cookies

Chocolate Chip Cookies

<table>
<thead>
<tr>
<th>Prep Time: 10 Minutes</th>
<th>Cook Time: 15 Minutes</th>
<th>Ready In: 40 Minutes</th>
<th>Yields: 18 servings</th>
</tr>
</thead>
</table>

**INGREDIENTS:**
- 2 cups all-purpose flour
- 1/2 teaspoon baking soda
- 1/2 teaspoon salt
- 3/4 cup unsalted butter, melted
- 1 cup packed brown sugar
- 1/2 cup white sugar
- 1 tablespoon vanilla extract
- 1 egg
- 1 egg yolk
- 2 cups semisweet chocolate chips

**DIRECTIONS:**
Preheat the oven to 325 degrees F (165 degrees C). Grease cookie sheets or line with parchment paper.

In a medium bowl, cream together the melted butter, brown sugar and white sugar until well blended. Beat in the vanilla, egg, and egg yolk until light and creamy.

Mix in the sifted ingredients until just blended. Stir in the chocolate chips by hand using a wooden spoon. Drop cookie dough 1/4 cup at a time onto the prepared cookie sheets. Cookies should be about 3 inches apart.

Bake for 15 to 17 minutes in the preheated oven, or until the edges are lightly toasted. Cool on baking sheets for a few minutes before transferring to wire racks to cool completely.

**Making Chocolate Chip Cookies Healthier – Data Sheet**

Step 1: Read over the recipe.
Question: Is this cookie healthy and nutritionally balanced? Why or why not?

Step 2: Read over the article “Ways to Make Recipes Healthier”.

Step 3: Choose three ingredients to change or add in the recipe in order to make it better. Write them in the boxes below and answer the questions.

<table>
<thead>
<tr>
<th>Ingredient:</th>

<td>How will this change make the food healthier?</td>
</tr>
</tbody>
</table>

On the back of this sheet, write a short note to the producer explaining how the changes you have made will help the producer provide a healthier, more nutritious snack for the consumer.

**Ways to Make Recipes Healthier**

1. **Reduce the amount of fat, sugar and sodium**
   
   With most recipes, you can reduce the amount of fat, sugar and sodium without losing the flavor. By cutting fat and sugar, you also cut calories. How much can you leave out without affecting the flavor and consistency of the food? Apply the following general guidelines:
• **Fat.** For baked goods, use half the butter, shortening or oil and replace the other half with unsweetened applesauce, mashed banana or prune puree. You can also use commercially prepared fruit-based fat replacers found in the baking aisle of your local grocery store.

• **Sugar.** Reduce the amount of sugar by one-third to one-half. When you use less sugar, add spices such as cinnamon, cloves, allspice and nutmeg or flavorings such as vanilla extract or almond flavoring to enhance the sweetness of the food.

• **Sodium.** Reduce salt by one-half in baked goods that don't require yeast. For foods that require yeast, don't reduce the amount of salt, which is necessary for leavening. Without salt, the foods may become dense and flat. For most main dishes, salads, soups and other foods, however, you can reduce the salt by one-half or eliminate it completely.

Other ingredients may contain sugar, fat and sodium, and you can decrease them as well. For example, if the recipe calls for 1 cup shredded cheddar cheese, use 1/2 cup instead. Or use less soy sauce than is indicated to decrease the amount of sodium in the food.

2. **Make a healthy substitution**

Healthy substitutions not only reduce the amount of fat, calories and sodium in your recipes, but also can boost the nutritional content. For example, use whole-wheat pasta in place of enriched pasta. You'll triple the fiber and reduce the number of calories. Prepare a dessert with fat-free milk instead of whole milk to save 63 calories and almost 8 grams of fat per cup.

3. **Delete an ingredient**

In some recipes, you can delete an ingredient altogether; likely candidates include items you add out of habit or for appearance, such as frosting, coconut or nuts, which are high in fat and calories. Other possibilities include optional condiments, such as pickles, olives, butter, mayonnaise, syrup, jelly and mustard, which can have large amounts of sodium, sugar, fat and calories.

4. **Change the method of preparation**

Healthy cooking techniques — such as braising, broiling, grilling and steaming — can capture the flavor and nutrients of your food without adding excessive amounts of fat, oil or sodium. If your recipe calls for frying the ingredients in oil or butter, try baking, broiling or poaching the food instead. If the directions say to baste the meat or vegetables in oil or drippings, use wine, fruit juice, vegetable juice or fat-free vegetable broth instead. Using nonstick pans or spraying pans with nonstick cooking spray will further reduce the amount of fat and calories added to your meals.

5. **Change the portion size**

No matter how much you reduce, switch or omit ingredients, some recipes may still be high in sugar, fat or salt. In these cases, reduce the amount of that food you eat. Smaller portions have less fat, calories and sodium and allow you to eat a wider variety of foods during a meal. Eating a variety of foods will ensure that you get all the energy, protein, vitamins, minerals and fiber you need.

**Putting it all together**

As you look over your recipe, decide what to change and how to change it. Make notes of any alterations, so you can refer to them the next time you prepare the food. You may have to make the recipe a few times, adjusting your alterations, before you get the results you want. But finding the right combination of ingredients — for the desired taste, consistency and nutrients — is well worth the trouble.

Assessment Option 3 – Advertising

Goal:
The goal is to inform and persuade consumers to eat foods rich in vitamins and minerals.

Role:
You are an advertiser for a local farmer’s market.

Audience:
The target audience is the consumer.

Situation:
You need to review information about the six most important vitamins and minerals and create a brochure that gives information about vitamins and minerals. The brochure should help the consumer understand the advantages, disadvantages, and sources of each vitamin and mineral.

Product Performance and Purpose:
Step 1: You need to review the information provided about the ten most important vitamins and minerals.

Step 2: Then, you need to choose 3 vitamins and 3 minerals you think the consumer should know about.

Step 3: Next, take notes on the advantages, disadvantages, foods, and recommended amounts for each vitamin or mineral.

Step 4: Finally, you create a brochure that informs about the six most important vitamins and mineral.

Standards and Criteria for Success:
Your brochure should...
- Tell the consumer the advantages and disadvantages of each vitamin and mineral
- Give consumers ideas of foods to eat that contain the vitamins and minerals
- Tell consumers how much of each vitamin and mineral they should consume
- Contain correct spelling, grammar, and punctuation

Materials: Brochure template, Nonfiction passage on vitamins and minerals, crayons or colored pencils, pencils, planning sheet, computer with Internet access OR information on vitamins and minerals

</tbody>
</table>

Step 1: Read the article “The Ten Most Essential Vitamins and Minerals”.
Step 2: Choose three vitamins and three minerals.
Step 3: Find information on each vitamin or mineral and enter it in the graphic organizer below.

<table>
<thead>
<tr>
<th>Name:</th>
<th>Vitamin 1</th>
<th>Mineral 1</th>
<th>Vitamin 2</th>
<th>Mineral 2</th>
<th>Vitamin 3</th>
<th>Mineral 3</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
</tbody>
</table>

Step 4: Turn your notes into sentences and fill-in your brochure template.
Step 5: Make sure your brochure is attractive and colorful, and free of spelling, grammar, and punctuation mistakes.
The 10 Most Essential Vitamins and Minerals

There is an information overload on vitamins and minerals to be included in a healthy diet. It is often difficult to determine what is necessary and what is optional from the choices you have.

**Here are the 10 most important Vitamins and Minerals your body needs:**

1. **Iron (mineral)** - Fortified cereals, whole grains, dried fruits, nuts and seeds are important sources of iron. Red meat is also rich in iron but it should be taken only three servings per week. Combination of these iron supplements with ingredients high in Vitamin C will help your body absorb the iron properly.

2. **Vitamin D** - Deficiency leads to rickets in children, and osteoporosis and other diseases in Adults. Vitamin D is very necessary for Cancer prevention. Good sources are vitamin D-fortified milk and milk substitutes, fatty fish such as salmon, and vitamin D-fortified yogurt.

3. **Calcium (mineral)** - Along with Vitamin D, is necessary for bone health. Milk, fortified soy milk, dairy products, almonds, beans, sesame seeds and broccoli are Calcium rich food.

4. **Selenium (mineral)** - It is a lesser known mineral but it is never the less important. It supports the immune system, reduces inflammation and helps protect from cancer. Sunflower seeds, fish, shellfish, red meat and one Brazil nut daily will give you enough selenium.

5. **Vitamin C** - This is an antioxidant vitamin that is believed to protect the brain from damage caused by Alzheimer. It helps you to tackle stress better and also protects you from common cold. A glass of Orange juice, citrus fruits, bell peppers, kiwifruit, papaya, broccoli, dark leafy greens and strawberries will provide you Vitamin C.

6. **Vitamin K** – This vitamin plays an important role to strengthen the bones, avoid blood clotting and prevent hardening of arteries. Dark, leafy vegetables are good source of Vitamin K.

7. **Folate (vitamin)** – It reduces risk of Alzheimer. It is good for pregnant women as it reduces the risk of having babies with neural tube defects. Spinach helps you get folate. Other sources are beans, peanuts, broccoli, corn, lentils and oranges.

8. **Vitamin E** fights – This is another antioxidant that reduces risk of heart disease, stroke and Alzheimer. Daily intake of nuts and seeds such as almonds and sunflower seeds will provide you Vitamin E.
9. Magnesium (mineral) - It helps build strong bones and lower risk of diabetes by enhancing the action of insulin in your body. Beans, nuts, seeds and green vegetables such as spinach are great sources of Magnesium.

10. Potassium (mineral) - Helps to maintain blood pressure. It also helps reduce your risk of stroke. Beans, potatoes, sweet potatoes, bananas, dried fruits, winter squash, cantaloupe, kiwi, orange juice, prune juice and avocados are good sources of Potassium.

Visit the following website for additional information on the ten most essential vitamins and minerals:

*National Institutes of Health: Vitamin and Mineral Fact Sheets*

Goal:
The goal is to create a tasty and nutritionally balanced menu for the Happy Feet Day Camp.

Role:
You are a chef for the Happy Feet Camp Corporation.

Audience:
The target audience is the campers at the day camp.

Situation:
You need to design a menu for one day, including three main meals and two snacks, using the USDA MyPyramid guidelines for children. The menu should also include a letter to parents explaining how the menu is healthy and nutritious for the campers.

Product Performance and Purpose:
Step 1: You need to find out the MyPyramid guidelines for children.

Step 2: Then you need to plan three meals and two snacks using the guidelines.

Step 3: Next, you need to create a chart showing the fat, protein, carbohydrates, and calories for the meals on the menu.

Step 4: Finally, you need to write a letter to the parents explaining how your menu meets the MyPyramid guidelines.

Standards and Criteria for Success:
Your menu should...
- Meet MyPyramid guidelines
- Have three meals and two snacks
- Contain a chart showing nutrients and calories for each meal

Your letter should...
- Accurately explain why the menu is tasty and nutritionally balanced
- Be in proper friendly letter format
- Contain correct spelling, grammar, and punctuation

Materials: Menu planning sheet, computer with Internet access, paper, pencils, crayons or colored pencils.

Menu Planning Sheet
Purpose: Tasty and nutritionally balanced menu for Happy Feet Day Camp.

Information about the campers at the third annual Happy Feet Day Camp

20 boys
Average age: 10
Average weight: 90 pounds
Average height: 4 feet 6 inches
Average physical activity: 30-60 minutes a day

Step 1: Visit the MyPyramid Plan website to get the guidelines for the campers at the Happy Feet Day Camp. Use the information in the text box above to help you.

MyPyramid Plan for a boy, age 10, 90 pounds, 4 feet 6 inches tall, with 30-60 minutes of activity a day

Calories: _______________ Grains: _______________
Vegetables: _______________ Fruits: _______________
Meat and Beans: _______________ Milk: _______________
Oils: _______________

Step 2: Using the MyPyramid Plan, create a menu for the campers.
